# **ACTION**

# **Kentucky Bluegrass**

Quick to germinate and establish, Action is an ideal component for mixes designed to reduce soil erosion from wind and rain.

A durable, economical Kentucky bluegrass with a deep, aggressive rhizome system for improved drought recovery. Action is recommended for low maintenance turf, including parks and recreational turf. With a low nitrogen requirement and quick establishment, Action is ideal for cool season mixes where ground coverage is the primary concern and maintenance budgets are low.

**Early Spring Green-up** 

**Fine Texture** 

**Fast Establishment** 

### **Key features**

- Deep, Aggressive Rhizomes
- · Bright Spring-Green Color
- · Quick Germination and Establishment

# QUICK GERMINATION & ESTABLISHMENT

# Maintenance

Seeding Rate: 2-3lbs/M\*
Mowing (Recommendation) 2-3"
Mowing (Down to) 0.500"

\*M=1,000 square feet

### **Technical Information**

### **Applications**

With a low nitrogen requirement and quick establishment, Action is ideal for cool season mixes where ground coverage is the primary concern and maintenance budgets are low. Ideal for roadsides, parks, cemeteries, roadside berms, levees, and all low to moderately maintained turf areas.

Action's early spring green-up is well suited for areas with early spring use and for competing with spring weeds.

Species (blend or mixture): Action is best mixed with Perennial ryegrass and Fine fescue at approximately 30-40% by weight. When mixed with Tall fescue, 10-20%

## **Specifications**

Seeding and establishment may be done in spring or fall, but be wary of summer or winter annuals. For better early weed control, consider an application of Mesotrione in the seeding process. Plant seeds to a depth of no more than 0.25-0.50" below the soil surface to ensure good seed to soil contact. Thatch layers will only slow or impede germination success. After spreading seed, keep seedbed moist throughout germination, with extra care during the early stages to prevent seed from drying out after initial seed imbibition. Germination should begin within 10 to 21 days and be complete within 35 days. Remember, the full turfgrass establishment process may take 6 months to a year.
